

Mixed bookings

How export bookings work today

It is possible to have multiple items with same ISO on a booking. That in return will allow for multiple items with same ISO and with different details regarding Dangerous Cargo (also referred to as "Hazardous" or "IMO"), OOG, Reefer and weight.

This means a booking can for example look like this:

Booking Items							
Qty	Seq Nbr	ISO	Length	ISO group	Height	Is OOG	OH (cm)
1	1	42U1	40'	Open-top container	8'6"	•	15.0
1	2	42U1	40'	Open-top container	8'6"		-

Two items with the same ISO. One with OOG and one non-OOG.

New rules

APM Terminals Gothenburg will keep the "Order Item Not Unique" feature. Though we will block the possibility to "mix" OOG with non-OOG within the same ISO and booking. Same rules apply to Hazardous cargo and Power required reefers. The example above will not be possible.

It is although allowed to mix the details for OOG, HAZ and Reefer as long as all items within same ISO is OOG, HAZ or Reefer. Meaning:

Booking Items							
Qty	Seq Nbr	ISO	Length	ISO group	Height	Is OOG	OH (cm)
1	1	42U1	40'	Open-top container	8'6"	•	15.0
1	2	42U1	40'	Open-top container	8'6"	•	20.0

For example, if they are both OOG, they can have different Over height measurements. Same apply for Hazardous – IMDG Class, UNNR and Reefer – Temperature.
